

## Trust is the New Currency How Wealthy Are You?

Today, most business transactions – whether buying shampoo or tonight’s dinner – are faceless. That’s why in our digital world, trust is the new currency. This shift in consumer behavior, sometimes called the “trust economy,” is more than the quality of products or services you offer; it’s about constructing a bedrock of reliability and transparency so customers choose you over competitors.

“Trust keeps society running. Even the most trivial interactions rely on small acts of trust,” the *Economist* reported. This isn’t lost on company leaders either. PwC’s 25th Annual Global CEO Survey reported that behind industry conditions, consumer trust is the *most important* predictor of a company’s past and future financial performance.

However, trust is increasingly difficult to earn. Thanks to the recent emergence of AI, frequent mishandling of personal data by companies and relentless cyber-attacks, customers are more skeptical than ever. As product and service providers, PwC points out that we are constantly evaluated by our customers on whether or not we are “forces for good in society.” Make one slipup and that trust is gone, perhaps for good.

How you handle data and use technology to influence your customers’ experience will decide your fate in the trust economy. Prioritize the most important drivers of trust – empathy, reliability and integrity – and grow your customer loyalty this year and in the years to come.

### Technology’s Role In Improving Customer Trust

Our dependence on technology is undeniable, yet this very reliance makes us vulnerable. Computer pioneer Willis Ware once said, “The only computer that’s completely secure is a computer no one can use.”

This statement hits a nerve, especially for businesses navigating the complexities of digital security. The challenge, then, is to harness technology in a way that boosts, rather than undermines, customer trust.

### Be Transparent About Data Usage

Ever been shopping for a new shirt only to have an online ad pop up later for the same shirt? It's not a coincidence – it's data. Although customers expect you to collect data, they want a say in it. According to a report by Qonsent, 94% of consumers feel that having control over the data they share with companies is important.

Make sure you have a clear privacy policy that

reputation for protecting their data and information. According to a 2022 McKinsey survey, 53% of consumers will only engage with a company after checking for a good security track record. Even one breach could mean losing a significant amount of your customer base.

To build trust with your customers, make sure your company's cyber security strategy includes:

as much as 33%.

Technology enables businesses to offer personalized, seamless experiences that resonate with customers. Consider how e-commerce platforms use encrypted payment transactions and tailored shopping recommendations to provide secure and helpful interactions. Or CRM systems that act like an assistant who never forgets a face or a conversation, so you can manage customer interactions with greater personalization.

**“...Remember that your customer wants to trust you. You just have to deliver.”**

tells customers:

- ✓ What data you collect
- ✓ How you use it
- ✓ Who you share it with
- ✓ How they can adjust what data they share with you

Additionally, don't collect more data than you need, and ensure your team is well-versed in data security, drawing from clear internal processes around data management. Slack's "Privacy Policy" page is an excellent example of data transparency. It's written for the consumer (not in legalese), and it clearly explains what data is collected and why, and how users can change their preferences.

### Take Cyber Security Seriously

Customers want to know if you have a good

- ✓ Multi-factor authentication
- ✓ Proactive security software that stops attacks *before* they happen
- ✓ Regular security awareness training for all employees
- ✓ Frequent backups (local and remote, ideally)
- ✓ A disaster recovery plan to help you respond quickly and with authority, decreasing the risk of losing your customers after an incident

### Leverage Technology To Improve Your Customers' Experience

According to a 2018 report by Deloitte, customers spent 140% more with companies they had a positive experience with. Additionally, companies with positive interactions reduced customer service costs by

Above all, though, it's the *quality* of every interaction you have with customers that builds trust. Whether over the phone, by e-mail or across a store counter, remember that your customer wants to trust you. You just have to deliver.

### Embrace Trust And Earn Loyalty

Nearly half (46%) of consumers say they'll consider another brand if data practices are unclear, according to the McKinsey survey. On the flip side, organizations prioritizing digital trust are more likely to experience a 10% annual boost to their top and bottom lines. Listen to your customers. Prioritize a trust-based approach to your business and digital security, and you're not just winning trust now, you're setting up for years of loyal customers.

### “I DID NOT KNOW”

Unfortunately, that Excuse Doesn't Replenish Bank Accounts, Resolve a Data Breach or Erase Fines and Lawsuits

It can happen to anyone. That day when a hacker steals critical data that renders your office useless.

Cyber criminals are constantly inventing new ways to infiltrate companies, steal assets and disrupt lives. The only way to stop them...

**You Must Constantly Educate Yourself on How to Protect What's Yours**

We have the perfect way to help reduce your risk and keep you safe! Simply sign up to receive our FREE Cyber Security Tip of the Week. We'll send these byte-sized tips to your email in-box. Every tip is packed with unique and up-to-date, real-world solutions that keeps you one step ahead of the bad guys. And because so few people know about these security secrets, every week you'll learn something new.

## Cybersecurity TIP

**Prioritize protecting sensitive accounts!**

E-mail accounts

Banking/cash sending apps

Amazon/e-commerce sites

Accounts where you've entered credit card details

Accounts with sensitive info like SSN, address, etc.

# Mike Rowe on the Power of Authenticity

In today's marketplace, where consumer trust is the linchpin of success, authenticity emerges as a key differentiator for businesses. Who better to break down the power of authenticity than one of the most down-to-earth TV personalities in America – Mike Rowe.

Known for his unscripted, real-life experiences, Rowe has had a career – spanning from his unconventional presentations on QVC to his adventures in Discovery's *Dirty Jobs* – that offers rich lessons on the power of authenticity in life and business.

## Balance Authenticity And Authority

In 2001, Rowe worked at San Francisco's KPIX-TV. Eventually, he started a segment called "Somebody's Gotta Do It," where he interviewed tradespeople. Initially, Rowe imagined that he, the host, would explain the interviewee's work to the audience. After all, that's how his hosting experience had been so far.

Down in the sewers of San Francisco with Gene Cruz, Rowe began his opening line for the show. Just then, human feces splattered across his face. In response, Cruz said something that later became Rowe's mantra: "Down here in the sewer, it's best to keep your mouth shut." But Rowe kept trying his line – and failing. Between invasive cockroaches and rats, he couldn't get it right. Finally, Rowe gave up and let Cruz do the talking. The show was a massive hit and later became Rowe's foundation for his legendary performance on *Dirty Jobs*.

Instead of talking as the expert, Rowe let the *real* expert talk. In the city sewers, he realized he had to strike a new balance between expert authority and authenticity in order to connect sincerely with his audience.

"At that moment, I transitioned from – what I would call in cable TV anyway – the age of authority, where all the information came

from an expert or a host, into the age of authenticity we're living in today, where the viewer is more skeptical and prefers to get their information by watching a conversation instead of a lecture," he explains.

Somewhere between authority – knowing your business and having all the facts – and genuine authenticity – being completely yourself with no offense (which your audience doesn't want to see anyway) – is where authenticity lives, Rowe says. The key to building a loyal audience to figure out how to strike that balance.

## Authenticity Is More Than Passion

In an early episode of *Dirty Jobs*, Mike plunged into a septic tank alongside Les Swanson. After 15 years as a guidance counselor and psychologist, Swanson had left his career to start a septic-tank-pumping venture near Madison, Wisconsin.

"It was Les Swanson who said to me, 'I'm not here because I'm passionate about septic tanks,'" Mike reflects. "'I'm here because I wanted to do something different.'"

Rowe's journey mirrored a similar path. He'd crawled into sewers and septic tanks, using his skills in conversation to shine a light on others' important work. "The lesson isn't to not have passion. Passion is important to follow – bring it with you in all things," Rowe says. "But real job satisfaction comes from finding an opportunity and finding a way to be great at it, and then finding a way to love it."

## Client Spotlight

### Personal Service is a WIN for Us

We were able to discuss our company's specific needs with David and not feel pressured into purchasing software or hardware that are not in line with our specific needs. Instead, David provided a variety of customized options for us to choose from. In my experience, **LDD is better at prompt service than any other IT firm we've worked with.** The individualized service LDD gives is invaluable.

### Turn Down the Volume on Stress: Why Leaders are Choosing Mindfulness Over Hustle

Meditation and mindfulness practices have been studied in a range of contexts – from college students to hardened marines (who showed faster stress recovery with mindfulness-based mind fitness training). Leaders who meditate think more clearly, stay calm in chaos and make smarter decisions. You don't need a mountain retreat to channel the Zen; meditation apps like Headspace, Calm and Insight Timer provide pocket-sized guided sessions to ease into this practice anywhere, anytime

Want to meditate without interruptions? Just hit "Do Not Disturb" on your phone. On Android, swipe down and tap "Do Not Disturb." Apple folks, find it under "Settings" > "Focus" > "Do Not Disturb." Customize it to keep those calls and notifications quiet. This way, you can meditate peacefully and stay sharp for those big business moves.

# Big Tech Company Admits It's Listening To You

We've all suspected our devices are listening to us. How else could the clothing company you just told your sister about over brunch show up as a targeted ad on your Instagram feed? The tech community has largely denied listening without our permission. In fact, in 2017, Facebook had to publicly deny that it listens to its users (that's what they use location services and ad tracking for).

But Cox Media Group (CMG), a multibillion-dollar media empire that owns and operates TV and radio stations worldwide, admitted it's doing just that.

### How Are They Doing It?

404 Media gathered published marketing information from CMG and determined that it uses AI to identify conversations via smart devices – collecting information about our spending behaviors, interests and how we spend our time – to deliver ads to us. CMG calls it "Active Listening." Though any mention

of CMG's Active Listening platform has been removed from its website, the archived information is still accessible.

A document published by CMG's VP of digital strategy said, "Yes, our phones are listening to us," and "CMG has tech capabilities to use to your business advantage." For example, it claimed to use audio data to create detailed customer profiles, which benefits consumers (fewer irrelevant ads) and businesses (targeted marketing). Still, no one knows *exactly* how they do it, technically speaking. Would it still adhere to safety restrictions imposed by companies like Apple that prevent other companies from listening to its devices? No one knows.

CMG later published a statement saying, "CMG businesses do not listen to any conversations or have access to anything beyond a third-party aggregated, anonymized and fully encrypted data set that can be used

for ad placement. We regret any confusion..."

*Business Insider* states, "It's important to note that it's not clear whether this technology and marketing is actually happening." Nevertheless, this incident is an important reminder to refresh your privacy settings and pay attention to the real possibilities of companies listening in.

### Adjust Your Privacy Settings Now

Although tech leaders like Google and Apple have policies around how and when they listen to you, fake apps and shady companies do not. Any app with access to your microphone could listen to your most private conversations.
